## Abstracts

The global Fibrinogen Concentrate market size is expected to reach \$ 2847 million by 2032, rising at a market growth of 10.3% CAGR during the forecast period (2026-2032).

Fibrinogen concentrate is a high-purity plasma protein preparation derived from human plasma or produced through recombinant technology, with fibrinogen as its main component. It plays a crucial role in blood clotting, as fibrinogen is converted into fibrin by thrombin to form a blood clot and stop bleeding. Fibrinogen concentrate is primarily used to treat congenital or acquired fibrinogen deficiencies, manage bleeding during surgery or trauma, and address other conditions requiring rapid fibrinogen supplementation.

The market for fibrinogen concentrate is primarily driven by the increasing prevalence of bleeding disorders and surgical procedures that require rapid hemostasis, as well as growing awareness and adoption of targeted blood management therapies. Advances in plasma fractionation and recombinant technologies, along with rising demand for safer, pathogen-reduced, and high-purity blood products, are also fueling market growth. Additionally, an aging population, higher incidence of trauma and cardiovascular surgeries, and expansion of healthcare infrastructure in emerging regions contribute to the increasing demand for fibrinogen concentrate.

The major producers in the industry are CSL Behring, LFB Group and Shanghai RAAS Blood Products, whose revenue ratios in 2024 are 52%, 20% and 10% respectively.

This report studies the global Fibrinogen Concentrate production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Fibrinogen Concentrate and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
