Abstracts

The global Ficus Hirta Extract market size is expected to reach \$ 23.25 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

In 2025, the global production of Ficus hirta extract was approximately 680 tons, with an average selling price of around US\$22 per kilogram. The production capacity in 2025 is 820 tons, with an average gross profit margin of approximately 15-25%. Ficus hirta extract is a substance with various physiological activities extracted from the traditional Chinese medicine Ficus hirta. Its main components include flavonoids, coumarins, terpenes, and phenolic compounds, such as psoralen and apigenin. It has the effects of strengthening the spleen and lungs, dispelling dampness and phlegm, and promoting blood circulation, and can be used in the production of health products and traditional Chinese medicine preparations.

Upstream in the Ficus hirta extract industry chain, the core raw material is Ficus hirta, a plant of the Moraceae family. Its supply is affected by the scale of artificial cultivation, harvesting years, and climatic conditions in the producing areas (mainly in Guangdong and Guangxi). Downstream applications are widely concentrated in the health food and functional beverage industries (as a raw material for enhancing immunity and strengthening the spleen and qi), the modern production of traditional soups and medicinal food packages, and the development of some personal care and daily chemical products (utilizing its plant aroma and potential anti-inflammatory properties). Ficus hirta extract, a traditional plant extract, has been gaining increasing attention in the global health industry in recent years. Rich in various active components such as polysaccharides, flavonoids, and organic acids, Ficus hirta possesses numerous health benefits, including anti-inflammatory, antioxidant, and immune-enhancing properties. Therefore, it is widely used in health supplements, food additives, and traditional Chinese medicine. Particularly in China and Southeast Asian countries, the demand for Ficus hirta extract is continuously increasing, mainly for use in products aimed at

boosting immunity, improving digestive health, and anti-aging.

With consumers' growing preference for natural, additive-free health products, Ficus hirta extract, as a natural plant source, is becoming increasingly popular among businesses and consumers. Furthermore, its antioxidant and anti-inflammatory functions have also attracted the attention of the cosmetics industry, leading to its use in the development of anti-aging and skin care products.

In the future, the global market for Ficus hirta extract is expected to continue to grow. With continuous advancements in production technology and expanding market demand, especially in the Asia-Pacific region, Ficus hirta extract has enormous market potential. Simultaneously, with increasing global health awareness and the popularization of natural plant extracts, the application prospects of Ficus hirta extract are promising, and its market size is expected to steadily expand in the coming years, particularly in the fields of health foods and natural skincare products.
