Ficus hirta extract is a substance with various physiological activities extracted from the traditional Chinese medicine Ficus hirta. Its main components include flavonoids, coumarins, terpenes, and phenolic compounds, such as psoralen and apigenin. It has the effects of strengthening the spleen and lungs, dispelling dampness and phlegm, and promoting blood circulation, and can be used in the production of health products and traditional Chinese medicine preparations.

Upstream in the Ficus hirta extract industry chain, the core raw material is Ficus hirta, a plant of the Moraceae family. Its supply is affected by the scale of artificial cultivation, harvesting years, and climatic conditions in the producing areas (mainly in Guangdong and Guangxi). Downstream applications are widely concentrated in the health food and functional beverage industries (as a raw material for enhancing immunity and strengthening the spleen and qi), the modern production of traditional soups and medicinal food packages, and the development of some personal care and daily chemical products (utilizing its plant aroma and potential anti-inflammatory properties).
