The global Field Automatic Pressure Calibrator market size is expected to reach \$ 1108.3 million by 2029, rising at a market growth of 8.9% CAGR during the forecast period (2023-2029).

In the oil and gas field, automatic pressure calibrators are used to control and manipulate the pressure of fluids or gases to maintain uniformity and accuracy. They are also used as measuring instruments for various liquid, gas and static pressure systems. In aerospace and defense, automatic pressure calibrators are used to control a variety of fluids, such as water or gases. They can also be used as measuring instruments for a variety of applications, including test equipment for pressurized systems involving oil/gas/steam pumps. North America is expected to dominate the global pressure calibrator market during the forecast period. This can be attributed to the increasing demand for pressure calibration equipment from the oil and gas industry in the region. The Latin American region is emerging as a new market for pressure calibration equipment. This is mainly attributed to the increasing demand in oil and gas, power and energy, and pharmaceutical applications in these regions. The European region is expected to become the second largest market for pressure calibration equipment owing to the rapid growth of the automation industry.

Field automatic pressure calibration would be the perfect solution for calibrating gauges, transmitters, and switches. A pressure calibrator is a high-precision pressure measuring device capable of verifying (or calibrating) the pressure reading of another pressure measuring instrument. These instruments are also called pressure standards. The pressure calibrator must be more accurate than the instrument being calibrated. It has cover measuring and generating pressure automatically and supporting instruments with HART. It adopts full intelligent control, generally use for pressure gauge and micro

differential pressure gauge.
