## Abstracts

According to our (Global Info Research) latest study, the global Field Joint Coating System market size was valued at US\$ 690 million in 2025 and is forecast to a readjusted size of US\$ 917 million by 2032 with a CAGR of 4.1% during review period.

A Field Joint Coating System is an on-site (or spoolbase) coating solution used to restore corrosion and mechanical protection at pipeline girth-weld joints—the uncoated “field joints” left between factory-coated pipe sections after welding. It typically integrates surface preparation, pre-heating/temperature control, and an application method (e.g., FBE powder spray, liquid epoxy, heat-shrink sleeves, or multi-layer systems) plus curing/inspection to ensure the joint matches the performance of the mainline coating.

Industry trends for Field Joint Coating Systems include the shift toward robotic automation, intelligent quality monitoring, eco-friendly low-VOC materials, and customized solutions for deepwater, arctic and hydrogen pipeline environments; key opportunities come from global oil & gas pipeline expansion, aging municipal water/wastewater rehabilitation, stricter corrosion protection regulations, and growing demand from renewable energy projects; main challenges involve high R&D and certification costs, raw material price volatility, complex on-site construction conditions, shortage of skilled operators, and competition from low-cost traditional alternatives.
