## Abstracts

According to our (Global Info Research) latest study, the global Field Service Software Solutions market size was valued at US\$ 5860 million in 2025 and is forecast to a readjusted size of US\$ 9134 million by 2032 with a CAGR of 6.6% during review period.

Field Service Software Solutions is an integrated digital management system designed for enterprises with a large number of field/on-site personnel. By integrating functions such as work order management, personnel scheduling, route optimization, asset monitoring, mobile operations, customer communication, and on-site settlement, it achieves digital and automated management of the entire on-site service process. This improves service efficiency, reduces operating costs, increases first-time repair rates, and enhances customer experience. Its core value lies in facilitating end-to-end collaboration between the back-end system, dispatch center, field engineers, and customers.

Field Service Software Solutions (FSM) has high growth potential, driven primarily by enterprise digital transformation, the widespread adoption of mobile internet, enhanced customer service experiences, and the integration of IoT and AI technologies. More and more enterprises need to improve service efficiency and asset utilization through real-time scheduling, predictive maintenance, and data-driven decision-making. Meanwhile, cloud computing and SaaS models have significantly lowered the adoption threshold for SMEs, enabling FSM to rapidly penetrate from large enterprises to SMEs. Furthermore, with the maturation of technologies such as IoT, remote maintenance, AI-driven order dispatching, and augmented reality, field services are shifting from 'manually driven' to 'intelligently driven.' This type of software is gradually becoming one of the core operating systems for service companies and will continue to maintain a double-digit

growth trend in the future.
