Abstracts

According to our (Global Info Research) latest study, the global Fieldbus Stepper Drive market size was valued at US\$ 324 million in 2025 and is forecast to a readjusted size of US\$ 543 million by 2032 with a CAGR of 7.6% during review period.

In 2025, global sales of Fieldbus Stepper Drive were approximately 1.4 million units, with an average ex-factory selling price of around USD 225 per unit. Gross margins of major manufacturers were generally in the range of 35%–45%.

A Fieldbus Stepper Drive is a control device integrating an industrial communication interface, motion control functions, and a stepper motor power stage. It receives position, speed, acceleration, homing, start, and stop commands through industrial fieldbus protocols such as EtherCAT, CANopen, Modbus, PROFINET, and EtherNet/IP, and converts these commands into the phase currents required to directly drive an external stepper motor. Based on the control architecture, the product can be divided into open-loop and closed-loop types. Closed-loop models are typically used with encoders to reduce the risk of lost steps and improve positioning accuracy.

Compared with conventional pulse-controlled stepper drives, Fieldbus Stepper Drive reduces control wiring and enables multi-axis networking, remote parameter configuration, operating-status monitoring, and fault diagnostics. Some models also support synchronized motion and CiA 402-compliant motion control modes. The product is primarily used for positioning, conveying, rotary motion, and linear motion control in semiconductor equipment, 3C manufacturing equipment, packaging equipment, medical equipment, logistics equipment, and other automated machinery.
