Fill Finish Cartridge refers to a sterile, ready to fill primary packaging container system that is used in pharmaceutical fill-finish operations to contain injectable drug products such as biologics, vaccines, monoclonal antibodies, recombinant proteins, and specialty injectables. In 2025, global fill finish cartridge production reached approximately 1,371 million unit, with an average global market price of around USD 1.80 per unit. A factory gross profit of USD 0.54 per unit with 30% gross margin. A single line full machine capacity production is around 50 million unit per line per year. The upstream is dependent on glass, polymer and siliconization materials. The downstream demand is concentrated in vaccines, injectables drugs and emergency drugs. 10mL polymer cartridge used Swissfillon as fill-finish partner provides integrated solution for clinical filling of wearable injector and accelerates clinical development for innovative injectable drugs. India market is driven by expanded fill-finish facilities and substantial investment in biotech-enabled sterile fill lines and automated capping and inspection systems. South Korea market is driven by government biotech support policies and increasing demand for contract manufacturing services drive market.
