The filling level sensor is an automated device used to detect and control the height of liquid or granular materials in a container. It monitors the liquid level changes in real time through capacitance, ultrasonic, optical or pressure sensing technology to ensure accurate filling (error $\pm 0.1\% \sim 1\%$). It is widely used in production lines in the food and beverage, pharmaceutical, chemical and daily chemical industries, such as bottled water, drug injection, paint filling and other scenarios. Its core features are high precision and corrosion resistance (316L stainless steel/ceramic material), and it supports linkage with the PLC system to achieve automatic control.
