Abstracts

A film capacitor is a device that uses a thin plastic or paper film as the dielectric between the two metallic electrodes. The plastic film is drawn into a thin thickness on which the electrodes are placed. The entire assembly is then placed into a casing, which protects it from the external environment. Since capacitors are low-cost devices, plastic or paper is used as the dielectric. For further cost reduction, cheaper plastics can be used.

Scope of the Report:

This report focuses on the Film Capacitor in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The polyester film capacitor segment accounted for the major shares of the film capacitor market. These capacitors are mainly used in the automotive, consumer electronics, lighting, power, and telecommunication industries. The low cost of these capacitors and their increased usage in coupling and decoupling applications, will be the major factors fueling the growth of this market segment.

According to this market research and analysis, the AC applications segment will account for the major shares of this marketplace throughout the predicted period. Factors such as the growing need for renewable energy resources and the demand for capacitors in high-voltage AC power grids, will fuel the growth of the market in this segment.
