According to our (Global Info Research) latest study, the global Filter Power Supply market size was valued at USD 849.9 million in 2023 and is forecast to a readjusted size of USD 1329.7 million by 2030 with a CAGR of 6.6% during review period.

Filters are used to eliminate undesired high frequencies (i.e., noise) that are present on AC input lines. Additionally, filters are used on a power supply's output to reduce ripple.

According to our research, the global Electronic Components market is approximately USD 466.61 billion in 2022. The Asia-Pacific region is a major market for electronic components. The downstream application fields of the electronic components industry are extensive, including communication equipment, consumer electronics, automotive electronics, smart home, industrial control, military security and other fields. Unlike the strong industry demand in 2021, downstream industry demand in 2022 showed a differentiated trend. The demand for traditional electronic applications represented by mobile phones and computers has turned weak, which has a greater impact on the demand of the entire industry; the demand for communication equipment and data centers has maintained growth but slowed down, and the industrial and Internet of Things driven by digital transformation and the development of artificial intelligence technology The steady growth of application demand and the accelerated development of the new energy vehicle market can offset the decline in some consumer markets and provide support for long-term demand growth.

The Global Info Research report includes an overview of the development of the Filter Power Supply industry chain, the market status of Railway (5V, 12V), Mine (5V, 12V), and key enterprises in developed and developing market, and analysed the cutting-
