Abstracts

The global Filter Press Rack market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Racks for filter press are the structural frames that support the filter plates and filter cloths. Filter presses are used for solid-liquid separation in various industries, such as mining, chemical, and pharmaceutical. The racks are typically made of steel or stainless steel, and they come in various sizes and designs depending on the specific application and the size of the filter press.

The racks are designed to withstand the high pressure generated during the filtration process, as well as the weight of the filter plates and the slurry being filtered. They also provide a means for opening and closing the filter press, allowing for easy removal of the filter cakes and replacement of the filter cloths.

In summary, racks for filter presses are essential components that provide structural support for the filter plates and filter cloths, and enable efficient solid-liquid separation in various industries.
