According to our (Global Info Research) latest study, the global Filter Terminal Blocks market size was valued at US\$ 1010 million in 2024 and is forecast to a readjusted size of USD 1708 million by 2031 with a CAGR of 5.6% during review period.

The filter terminal block is an electrical connection device with integrated filtering function, which is used to suppress electromagnetic interference (EMI) and radio frequency interference (RFI) while providing safe and reliable line connection. It usually contains LC filter circuit or ferrite magnetic ring inside, which can effectively filter high-frequency noise. It is suitable for inverters, servo systems, industrial automation equipment and new energy fields (such as photovoltaic inverters, electric vehicle charging piles). It has the characteristics of high temperature resistance, vibration resistance and IP protection grade (such as IP67), and supports multiple wiring methods such as screw crimping, spring connection or PCB welding.
