## Abstracts

According to our (Global Info Research) latest study, the global Filtered Connectors market size was valued at USD 7775.5 million in 2023 and is forecast to a readjusted size of USD 11110 million by 2030 with a CAGR of 5.2% during review period.

The suppression or filtering of electromagnetic noise in connectors can be achieved by adding diodes and capacitors to separate interfering high-voltage or high-frequency noise from the desired lower frequency signals. These connectors are called filtered connectors and have been used in the industry for more than three decades to provide cost- and space-effective solutions to EMI problems. They can be used in multiple applications such as satellites, avionics systems, communications, missiles, consumer electronics, and medical instruments.

The commercial segment is the largest in the global filtered connectors market and is expected to reach a market value of over USD 2 billion during the forecast period. These connectors play a vital role in managing electromagnetic interference occurring as a result of the excessive use of electronic devices. With the proliferation of devices such as computer peripherals, communications, automotive, smartphones, tablets, e-readers, and GPS, the consumption of filtered connectors for these applications will further increase over the next few years.
