Filters for shielded rooms are key components designed for environments with high electromagnetic shielding requirements. They are installed at the interface between the shielded room and the outside world, such as ventilation openings, signal transmission lines or power cord entrances, to effectively prevent unwanted electromagnetic radiation (EMI) and radio frequency interference (RFI) from entering or escaping the shielded room. These filters ensure the safe passage of necessary signals and energy while maintaining the electromagnetic purity inside the shielded room through carefully designed circuits and shielding materials. They are the ideal way to protect precision electronic equipment such as servers, communication base stations and scientific research equipment from external electromagnetic interference. interfere with important equipment.
