The Final Test Machine (FTM) is a crucial piece of equipment in the semiconductor industry used for conducting final performance tests on encapsulated chips. As the last significant testing step before shipment, the FTM ensures the performance and reliability of chips in real-world applications. By simulating or replicating actual application environments, the FTM applies input signals to the chips and detects their output signals to verify if their functions and performance meet the design specifications. Equipped with sophisticated testing programs and algorithms, the FTM efficiently and accurately screens out compliant products while rejecting non-conforming ones, thereby safeguarding product quality and customer satisfaction.
