According to our (Global Info Research) latest study, the global Fine Hole Drilling Electrical Discharge Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Electrical discharge machining is a method in which sparks are generated by electricity between the opposite metals in pure water or oil and the metals are melted by the heat for processing. Electric discharge occurs at intervals of 1,000 to 100,000 times per second, and the metal is processed by repeating the processes of melting, cooling, and the dispersion of the metal. The minimum drilling diameter of the fine hole electric discharge machine tool studied in this report is about tens of micrometers or less. This report is a detailed and comprehensive analysis for global Fine Hole Drilling Electrical Discharge Machine market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Minimum Drilling Diameter and by Application.
