The global Fine Hole Drilling Electrical Discharge Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Electrical discharge machining is a method in which sparks are generated by electricity between the opposite metals in pure water or oil and the metals are melted by the heat for processing. Electric discharge occurs at intervals of 1,000 to 100,000 times per second, and the metal is processed by repeating the processes of melting, cooling, and the dispersion of the metal. The minimum drilling diameter of the fine hole electric discharge machine tool studied in this report is about tens of micrometers or less. This report studies the global Fine Hole Drilling Electrical Discharge Machine production, demand, key manufacturers, and key regions.
