Abstracts

A turbocharger is a turbine-driven forced induction device, which increases engine power and efficiency by inducing more air into the combustion chamber. This results in improved fuel efficiency and cleaner fuel combustion, improving overall engine performance. An automotive turbocharger consists of three components, namely turbine, compressor, and hub rotating assembly/center housing. Fine tuning turbochargers offer improved performance and durability. These turbochargers are compact and lightweight.

Scope of the Report:

This report focuses on the Fine Tuning Turbocharger in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. One of the major drivers for this market is Increased global automotive sales. Due to significant economic growth and increasing purchasing power of consumers in emerging economies like China, Brazil, and India, there is an increase in demand for passenger cars in these regions. The growth of these emerging markets has been vigorous because of ongoing industrialization and global trade activities in these regions. In recent years, China has invested massively in its automobile industry, which has made it the market leader. Also, China has been maintaining its position as the world's largest automotive market. The automotive market in India is dynamic and growing very rapidly. This is forcing the automotive OEMs to shift their focus to these markets to tap the huge potential.

One of the major factors hindering the growth of this market is Increased cost because of design complications and use of complex high-grade materials. The complexity of the

parts needed for automotive turbochargers poses a challenge for the market. As the applications of automotive turbochargers are increasing, the various parts used in them, such as turbines, vanes, sliding nozzles, impellers, compressors, and center housings are becoming increasingly complex in design. Automotive turbochargers also need additional components such as intercoolers, wastegates, and blow-off valves to make the turbocharger work efficiently. With these complications in design and use of high-grade materials, the cost of turbochargers is increasing, which in turn, increases the buying price of the vehicles.

The worldwide market for Fine Tuning Turbocharger is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
