Abstracts

According to our (Global Info Research) latest study, the global Finger Sphygmomanometer market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

The finger sphygmomanometer is a small and portable blood pressure measurement device. It uses modern electronic technology and sensor technology to monitor and analyze the pressure changes in the finger part to obtain the blood pressure value. The working principle of the finger sphygmomanometer is mainly based on the measurement principle of arterial blood pressure. When the heart contracts, blood is pumped into the aorta and flows to the whole body along the branches of the blood vessels. In the arteries in the finger part, blood flows and exerts pressure on the blood vessel wall. This pressure is the arterial blood pressure. Finger-type blood pressure monitors sense this pressure change through sensors and convert it into electrical signals for processing and display. Although finger-type blood pressure monitors have the advantages of portability and simple operation, their measurement results may be affected by factors such as the thickness of finger blood vessels, ambient temperature, and emotions, so their accuracy may be slightly lower than that of arm-type or wrist-type blood pressure monitors. When using, it is recommended to measure multiple times and take the average value to improve accuracy.

With the increase in the number of patients with hypertension worldwide, the overall scale of the home sphygmomanometer market is expanding. As part of this trend, finger sphygmomanometers also benefit from this trend. Finger sphygmomanometers are highly portable and suitable for carrying out and monitoring blood pressure at any time. However, compared with arm sphygmomanometers, their accuracy may be slightly

inferior. In addition, as people pay more attention to health management, consumers' demand for home sphygmomanometers is also increasing. In particular, high-risk groups such as the elderly and patients with hypertension pay more attention to real-time monitoring and management of blood pressure. This provides a broad space for the development of the finger sphygmomanometer market. The finger sphygmomanometer market is currently showing a steady development trend.
