## Abstracts

The global Finished Paper Conveying and Packaging System market size is expected to reach \$ 1945 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

A finished paper conveying and packaging system is an integrated end-of-line solution used in paper mills and paper converting plants to automatically handle, transport, sort, label, wrap, palletize, and transfer finished reels, sheets, or reams after winding or sheeting. It improves finishing efficiency, reduces manual handling, lowers product damage, and helps mills achieve higher throughput and traceability in paper and board production. In 2025, Global finished paper conveying and packaging system shipments are estimated at 1,050 Units, with an average ex-works price of 1,350 k US\$/Unit.

The market is mainly driven by paper mills' need to automate finishing operations, reduce labor intensity, and improve throughput consistency. Large mills increasingly require automated parent-roll handling, ream wrapping, and downstream full-line integration to reduce bottlenecks after sheeting and winding, while higher traceability and packaging-quality requirements are pushing customers toward smarter conveying, labeling, and packaging solutions.
