According to our (Global Info Research) latest study, the global Finned Resistor market size was valued at USD 1584.6 million in 2023 and is forecast to a readjusted size of USD 3041.3 million by 2030 with a CAGR of 9.8% during review period.

A finned resistor is a type of electrical resistor that incorporates fins or heatsinks as part of its design to enhance heat dissipation. Resistors are electronic components that restrict the flow of electric current, and they tend to generate heat in the process. In applications where resistors operate at high power levels or for extended periods, effective heat dissipation is crucial to prevent overheating and ensure reliable performance.

The fins on a finned resistor are typically made of materials with good thermal conductivity, such as aluminum. These fins increase the surface area of the resistor, allowing for better heat transfer to the surrounding air. As a result, the resistor can dissipate heat more efficiently, preventing temperature buildup.
