## Abstracts

The global Finned Resistor market size is expected to reach \$ 3041.3 million by 2030, rising at a market growth of 9.8% CAGR during the forecast period (2024-2030).

A finned resistor is a type of electrical resistor that incorporates fins or heatsinks as part of its design to enhance heat dissipation. Resistors are electronic components that restrict the flow of electric current, and they tend to generate heat in the process. In applications where resistors operate at high power levels or for extended periods, effective heat dissipation is crucial to prevent overheating and ensure reliable performance.

The fins on a finned resistor are typically made of materials with good thermal conductivity, such as aluminum. These fins increase the surface area of the resistor, allowing for better heat transfer to the surrounding air. As a result, the resistor can dissipate heat more efficiently, preventing temperature buildup.

This report studies the global Finned Resistor production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Finned Resistor, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2023 as the base year.
