According to our (Global Info Research) latest study, the global Finned Tube Oil Cooler market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Finned Tube Oil Cooler is an efficient heat exchange device. Generally, light tubes are combined with a large number of through-hole cooling fins through tube expansion and other processes to form finned tubes, which greatly increases the heat transfer area and improves the heat dissipation. The area can reach 8~10 times of the light pipe. When the finned tube is working, the high-temperature hydraulic oil in the tube transfers heat to the cold air outside the tube through the tube wall and fins. The closely stacked fins outside the tube can greatly optimize the flow of air between the fins and promote the turbulence of the airflow, thereby achieving the purpose of increasing the spring heat coefficient of the air side and enhancing the heat transfer effect. This type of cooler has a simple and compact structure, small volume and mass
