The global Fire Control Box market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A Fire Control Box, also known as a Fire Alarm Control Panel (FACP) or Fire Alarm Control Unit (FACU), is a crucial component of a fire alarm system that monitors inputs from fire detection devices and triggers appropriate response actions in the event of a fire or smoke detection. The main function of a Fire Control Box is to receive signals from smoke detectors, heat detectors, manual pull stations, and other fire detection devices installed throughout a building. When the system detects a potential fire or smoke, the control box activates alarms, emergency notification devices, sprinkler systems, and other fire suppression equipment to help ensure the safety of occupants and protect the property. Fire Control Boxes are typically installed in a central location within a building and are designed to provide a quick and effective response to fire emergencies.
