A fire curtain is designed to limit the spread of fire and smoke between different zones in a building to compartmentalise the fire. For this purpose, they deploy from ceiling to floor level. They need to be robust to withstand the heat and impact of the fire.

A smoke curtain is designed to restrict the flow of smoke to allow safe routes of escape, such as corridors and atria. For this reason, they can be deployed from ceiling to above head height in order not to impede the escape routes, or to ground for a complete barrier.
