Abstracts

A fire hose (or firehose) is a high-pressure hose that carries water or other fire retardant (such as foam) to a fire to extinguish it. Outdoors, it attaches either to a fire engine or a fire hydrant. Indoors, it can permanently attach to a building's standpipe or plumbing system.

Scope of the Report:

This report focuses on the Fire Hose in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The municipal fire service end user segment dominated the market and will continue to lead the market during the predicted period. Fire hose is indispensable to the municipal fire service industry because of its critical role in suppressing widespread fires. Large diameter hoses are widely used in fire departments, forestry, and residential places as these hoses move water efficiently. Different types of municipal fire hoses such as attack hose, supply line hose, soft suction hose, hi-rise hose, forestry hose, and portable fire hose are offered for municipal fire service end-users, which will, in turn, boost this segment's growth in the near future.

The worldwide market for Fire Hose is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
