The global Fire Hydrant Connector market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The fire hydrant connector is a device used to connect the hose to the fire hydrant so as to enter the water for fire fighting. It usually consists of a male or female connector connected to a fire hydrant and a hose connector connected to a hose. The fire hydrant connector allows firefighters to connect the hose to the fire hydrant quickly and conveniently, so as to provide reliable water source for fire fighting operation. The fire hydrant is usually located at the strategic point of the whole city or town and connected with the municipal water supply. Hydrant connectors are available in various sizes and types to accommodate different types of hoses and hydrants. They can be made of materials such as brass or aluminum, and can have features such as locking mechanism or valve control to regulate water flow.
