A fire curtain is designed to limit the spread of fire and smoke between different zones in a building to compartmentalise the fire. For this purpose, they deploy from ceiling to floor level. They need to be robust to withstand the heat and impact of the fire.

A smoke curtain is designed to restrict the flow of smoke to allow safe routes of escape, such as corridors and atria. For this reason, they can be deployed from ceiling to above head height in order not to impede the escape routes, or to ground for a complete barrier.

Fire curtains and smoke curtains are essential components of fire protection systems designed to control the spread of fire and smoke within buildings, enhancing safety and minimizing property damage. These curtains act as barriers, compartmentalizing the area affected by a fire. Here are key aspects and trends related to the fire curtains and smoke curtains market:
