Abstracts

Fire protection materials are a class of materials which find use in applications that help ensure safety of buildings from hazards associated with fire. Fire detection, coupled with fire suppression through manual or automatic means, aid in curbing fire and damages resulting therefrom. Partitioning the overall building or construction structure with fire resistance rated floors and walls also assists in ensuring protection from fire. This could also involve the use of passive fire protection materials, such as fire resistant boards, sealants and fire resistant materials, such as mineral wool and fire proof coatings. Active fire protection materials, such as fire extinguishing foams, chemicals, water and sprays also constitute an important part of fire protection materials market.
