Abstracts

According to our (Global Info Research) latest study, the global Fire Protection Systems For EESS market size was valued at US\$ 887 million in 2025 and is forecast to a readjusted size of US\$ 1399 million by 2032 with a CAGR of 7.0% during review period.

Fire Protection Systems For EESS are integrated fire-safety systems used in lithium-ion battery cabinets, containers, energy storage stations, C&I storage systems and residential energy storage systems. Fire Protection Systems For EESS are usually customized based on project scale, cabinet/container configuration and required protection level, with an average system price of approximately US\$ 2,000?4,000 per set.

The value chain consists of gas detectors, sensors, controllers, valves, cylinders, piping, nozzles, aerosol compounds, FK-5-1-12, HFC-227ea, water-based suppressants and fire-electronics components upstream, BESS fire-protection system manufacturers, fire alarm and suppression integrators and special-hazard fire-equipment suppliers midstream, and battery makers, BESS integrators, EPCs, utilities, C&I owners and grid-side or renewable-side storage projects downstream.

The market is driven by rapid EESS deployment, stricter safety regulation after battery fire incidents and higher project compliance requirements. Lithium-ion BESS operates in high-energy-density, enclosed cabinets or containers, and thermal runaway may lead to flammable or toxic gas release, fire propagation, reignition and explosion risk.

Conventional building fire protection is not sufficient for multi-level risks across cells, modules, PACKs, cabinets and containers. As storage systems move toward higher capacity, liquid cooling, longer duration and international standardized delivery, fire

protection is becoming a mandatory safety layer for grid connection, insurance, EPC design and project financing.
