A fire resistance metal insulated sandwich panel is a type of composite building material designed to provide both insulation and fire resistance. It typically consists of two metal sheets (such as steel) that are bonded to a core material with insulating properties. The core material is often mineral wool or rock wool, known for its fire-resistant characteristics. These panels are commonly used in the construction of walls and roofs, especially in buildings where fire safety is a critical consideration.

The market for fire resistance metal insulated sandwich panels is driven by the stringent safety regulations in the construction industry. These panels are widely used in commercial and industrial buildings where fire protection is crucial. The demand for energy-efficient building materials that also meet fire safety standards contributes to the growth of this market. Manufacturers focus on developing advanced materials with improved fire resistance and insulation properties to meet evolving industry requirements.
