Abstracts

FST composite resins are materials that decreases the range of fire, smoke, toxic gases or postpones their access into sensitive regions. This group includes chemical agents as well as physically acting materials, e.g. fire-retardant gels, fire-fighting foams or cooling the fuels. They are called composite resins because one or more materials are mixed together to acquire the preferred properties in the end product. FST resins can be applied as coatings to an item. They have become a very distinguished in the fire retardant industry because of significance of prevention. In general, FST resins work either by starting a chemical reaction that ends the fire or by decreasing the flammability of items.
