According to our (Global Info Research) latest study, the global Fire Windows and Doors market size was valued at USD 2079.5 million in 2022 and is forecast to a readjusted size of USD 2864.2 million by 2029 with a CAGR of 4.7% during review period.

Fire doors are built with special materials designed to be fire-resistant. They look like regular doors, but often have windows in them. The windows must be made with a special kind of fire-resistant glass, and often have mesh wiring inside them to prevent the windows from shattering¹. Fire-resistant windows may include mesh glass, liquid sodium silicate, ceramic glass, or borosilicate glass. Fire doors can be made with a combination of timber, steel, gypsum, and aluminium.

Fire poses a major hazard to any type of property, be it commercial, residential or industrial. When it comes to safeguarding these spaces, making use of a fire extinguisher is important, but it also has certain limitations.

Hence, it is prudent that efficient fire strategies must be in place to protect the occupants of the residential or commercial property as well as vital belongings, equipment or important documents. Alongside using the typical detection mechanisms like smoke detectors and fire alarms, one also needs to consider a fire rated door. Fire doors, which storm, will guard your premises, guaranteeing that the fire doesn't spread, but instead is delimited to one area.
