## Abstracts

The global Firearm Propellant market size is expected to reach \$ 423.2 million by 2030, rising at a market growth of 3.0% CAGR during the forecast period (2024-2030).

The market for firearm propellants is influenced by factors such as demand for firearms, military expenditure, and civilian firearms ownership. As global conflicts and military modernization efforts continue, there's a consistent demand for firearm propellants. Additionally, trends in civilian gun ownership, recreational shooting, and hunting activities also impact the market. Technological advancements leading to cleaner-burning, more efficient propellants also drive innovation in this sector.

Firearm propellant refers to the chemical substance used to propel a projectile out of a firearm. It can come in various forms such as gunpowder, smokeless powder, or other modern propellants. The propellant burns rapidly, generating high-pressure gas that propels the bullet down the firearm's barrel.
