According to our (Global Info Research) latest study, the global Fireclay Tile market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Fireclay tile is made of refractory clays known as fireclay. These refractory clays are widely used for manufacturing ceramics, tiles and firebricks. Tiles made of fireclay consist of materials such as fine-grained micas, quartz, and other organic substances such as sulfur. Hence, most of the materials in fireclay are recycled. Fireclay tiles are primarily used to withstand high temperatures and extreme chemical and thermal stresses. These tiles usually have low thermal conductivity with greater energy efficiency. Fireclay tiles are widely used for high temperature applications where other ceramics would melt.
