According to our (Global Info Research) latest study, the global First-Level Energy Efficiency Refrigerator market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The driving factors for the development of first-class energy-efficiency refrigerators mainly include the following aspects:

Demand for energy efficiency: As global energy resources become increasingly tense, energy efficiency has become a focus of various industries. In the field of refrigeration equipment, improving energy efficiency ratio has become a trend. Compared with refrigerators with other energy efficiency levels, first-level energy-efficiency refrigerators can use energy more efficiently, thereby reducing energy consumption and carbon emissions, and meeting the global demand for energy conservation and emission reduction.

Technological innovation: With the continuous advancement of science and technology, refrigerator manufacturing technology is also constantly developing. In the design and manufacturing process of first-class energy-efficiency refrigerators, more advanced energy-saving technologies and materials are used, making their energy efficiency ratio even better. At the same time, the application of new technologies such as intelligence and Internet+ has also given first-class energy-efficiency refrigerators more functions and advantages.

Market demand: Consumers have increasingly higher requirements for energy efficiency of home appliances. Especially when purchasing high-energy-consuming

home appliances such as refrigerators, they pay more attention to their energy efficiency performance. First-class energy-efficiency refrigerators are widely welcomed and sought after by consumers due to their efficient energy utilization and low energy consumption, and market demand continues to increase.

Policy support: The government has continuously increased its support for the field of energy conservation and environmental protection, and has provided policy preferences and support for the promotion and popularization of high-efficiency energy-saving products. For example, purchasing a first-level energy-efficiency refrigerator can provide certain energy-saving subsidies or tax exemptions and other preferential policies. These policies further promote consumers' enthusiasm for purchasing first-level energy-efficiency refrigerators.

Corporate social responsibility: In order to fulfill their social responsibilities and establish a good corporate image, large home appliance companies actively promote high-efficiency and energy-saving products. These companies reduce their impact on the environment by continuously optimizing product design, production processes and supply chain management to reduce the energy consumption level of their products and promote high-efficiency and energy-saving products such as first-class energy-efficiency refrigerators.
