## Abstracts

According to our (Global Info Research) latest study, the global Fish Collagen Peptides market size was valued at US\$ 878 million in 2025 and is forecast to a readjusted size of US\$ 1086 million by 2032 with a CAGR of 3.1% during review period.

Collagen peptides are a kind of protein with diverse functions and an important element in healthy nutrition. Their nutritional and physiological properties can promote bone and joint health and help people have beautiful skin. This report mainly studies the fish collagen peptide market. Fish collagen peptides are a kind of high molecular functional protein. They are made from fish meat or fish skin, fish scales, fish bones and other fish processing byproducts and low-value fish. They are obtained through proteolysis technology to obtain small molecule peptide products.

Market drivers: As consumers' awareness of health and beauty continues to increase, fish collagen peptides are favored for their nourishing effects on skin, hair and nails. This has driven the rapid growth of the fish collagen peptide market. As the global population ages, the demand for health products and medical products is also increasing. As a functional protein with multiple health benefits, fish collagen peptides have broad market prospects among the elderly. The continuous advancement of biotechnology has improved the extraction and purification technology of fish collagen peptides, improving the purity and biological activity of the product. This helps to expand the application areas of the product and enhance the market competitiveness of the product. Fish collagen peptides are widely used in many fields such as health products, food and beverages, cosmetics, agriculture, animal nutrition and pharmaceuticals. This diversified application provides the market with more growth opportunities.

**Market development trend:** The global fish collagen peptide market size is expected to continue to grow, mainly due to the improvement of consumer health awareness and the intensification of the aging trend of the population. With the continuous advancement of biotechnology, the extraction and purification technology of fish collagen peptides will be further improved. This will help improve the quality of the product and reduce costs, thereby promoting the further development of the market. In addition to the traditional health care products and pharmaceutical industries, the application of fish collagen peptides in food and beverages, cosmetics and other fields will continue to expand. Especially in the cosmetics industry, fish collagen peptides are favored by consumers for their nourishing effects on skin and hair. The demand for fish collagen peptides in the Asia-Pacific region, especially in the Chinese market, will continue to grow. This is mainly due to the accelerated product development speed of domestic enterprises and the continuous emergence of new technologies. At the same time, mature markets such as North America and Europe will also maintain steady growth.

**Market constraints:** The raw materials of fish collagen peptides are mainly derived from fish processing by-products and low-value fish. However, the supply of these raw materials is affected by various factors such as season, region and catch, which may lead to insufficient supply of raw materials or price fluctuations. The production process of fish collagen peptides requires high-precision technology and equipment support, which may lead to high production costs. At the same time, strict quality control is also required during the production process to ensure the safety and effectiveness of the product. With the continuous development of the market, competition is becoming increasingly fierce. There are many brands and manufacturers in the market, and product homogeneity is serious. This may lead to more intense price wars and market share competition.
