Abstracts

According to our (Global Info Research) latest study, the global Fish Compound Premix market size was valued at US\$ 1151 million in 2025 and is forecast to a readjusted size of US\$ 1738 million by 2032 with a CAGR of 5.8% during review period.

In 2025, global production of fish compound premix reached approximately 512,800 metric tons, with an average selling price of around USD 2,180 per ton. Fish compound premix is an aquafeed intermediate product that builds upon basic vitamin and mineral premixes by incorporating additional functional nutritional components. It is primarily used in the production of formulated feeds for freshwater and marine fish. Added at relatively low inclusion rates, fish compound premixes not only fulfill essential nutritional requirements but also enhance growth performance, feed efficiency, and environmental adaptability, serving as a key element in the transition toward more efficient and precision-oriented aquaculture feed systems.

At present, the fish compound premix market is experiencing steady expansion, with demand closely linked to global fish farming output, increasing stocking densities, and ongoing feed formulation upgrades. Market conditions indicate that key participants include international aquaculture nutrition companies, large feed groups, and regional suppliers with strong technical capabilities, while downstream customers place greater emphasis on overall performance and formulation compatibility than on basic premixes. In terms of trends, rising environmental complexity and farming risks are driving enhanced functionality in stress resistance, gut health, and nutrient utilization, while the product category remains clearly differentiated from pharmaceuticals and animal health products. Market perspectives suggest that fish compound premix represents a mid-to-high value segment with moderate technological barriers and growth potential

exceeding that of basic premixes but below that of specialized functional additives.
