Abstracts

The global Fish Meat Slicer market size is expected to reach \$ 643 million by 2032, rising at a market growth of 8.3% CAGR during the forecast period (2026-2032).

Fish slicer is a food processing machinery equipment specifically designed for standardized slicing, slitting, oblique cutting or trimming of various fresh and frozen fish. It has the characteristics of corrosion resistance, anti sticking, and uniform cutting, and is divided into commercial small and industrial fully automatic models. It is widely used in aquatic processing plants, catering kitchens, and fresh food processing scenes, and can replace manual precision cutting of fish meat, improving processing efficiency and product specification uniformity. The sales volume in 2025 is 219000 units, with an average price of \$1685 per unit. The total production capacity is 250000 units, with a gross profit margin of 40%.

The global fish slicer market is currently in a dual track stage of steady expansion and structural upgrading, driven by the large-scale expansion of pre packaged dishes and central kitchens, the upgrading of global seafood consumption, and the forced automation substitution due to rising labor costs. The Asia Pacific region (especially China and Southeast Asia) is a growth engine, accounting for over 45% of the global market share. The growth rate of the Chinese market (9% -11%) is significantly higher than the global average, and mid-range models quickly replace imports with cost-effectiveness. The high-end intelligent market is still dominated by giants such as Marel from Norway, Baader from Germany, and JBT from the United States. The North American and European markets are mainly focused on high-end and precision demands, emphasizing food safety, traceability, and equipment stability, with high unit prices and thick gross margins.

The long-term competitive focus of the industry will be on two directions: intelligence and customization: AI visual recognition, servo precision control, and IoT data interconnection have become standard equipment for high-end models, which can increase raw material utilization to over 90% and adapt to flexible production of multiple fish species and specifications; The breakthrough of Chinese manufacturers lies in the self research of core components, modular design and after-sales localization, gradually narrowing the technology gap with overseas, and expanding emerging markets in Southeast Asia, the Middle East and Africa with the help of the 'the Belt and Road'. In the short term, the policy dividends of pre packaged vegetables going abroad and deep processing of aquatic products will continue to release the demand for equipment updates; In the medium to long term, enterprises with comprehensive capabilities in technology, cost, and service will dominate market differentiation and accelerate the clearance of low-end production capacity.
