Fish oil is a virtually unique source of natural LC omega-3 fatty acids – EPA, DPA and DHA. It comes from fatty fish, specifically the tissue of fatty fish, such as trout, mackerel, tuna, herring, sardines, and salmon.

This report counts and analyses the crude fish oil, which is obtained at the beginning of the fishmeal production process. Here the anchovy is pressed to separate the solids, which will later become fishmeal. From the fatty material, oil will be stored in tanks, preserving the optimal levels of oxidation or freshness. Fish oil is valued in the market for its great nutritional value of Omega 3 fatty acids, which is essential for the proper functioning of the nervous and cardiovascular systems.

This report studies the global Fish Oil production, demand, key manufacturers, and key regions.
