Abstracts

According to our (Global Info Research) latest study, the global Fishery Dissolved Oxygen Monitoring System market size was valued at US\$ 617 million in 2025 and is forecast to a readjusted size of US\$ 820 million by 2032 with a CAGR of 4.2% during review period.

The fishery dissolved oxygen monitoring system is an advanced monitoring device used to monitor the dissolved oxygen content in water bodies in real time. The system continuously detects the dissolved oxygen concentration through high-precision sensors and transmits the data to the central processing unit for analysis and processing. The system is characterized by its automatic alarm function. When the dissolved oxygen content is lower than the preset safety threshold, the system will immediately issue an alarm to remind the user to take corresponding measures. The advantage of the fishery dissolved oxygen monitoring system is that it is highly integrated and intelligent. It can not only achieve 24-hour uninterrupted monitoring, but also allow users to grasp the dissolved oxygen status of the water body anytime and anywhere through remote control technology, effectively ensuring the healthy growth of aquatic organisms, while improving the automation level of fishery production and reducing labor costs. It is an indispensable technical means in modern fishery farming.
