Abstracts

The global Fisheye Security Cameras market size is expected to reach \$ 5440 million by 2032, rising at a market growth of 9.0% CAGR during the forecast period (2026-2032).

In 2025, global Fisheye Security Camera output reached about 25 million units and global capacity of around 35 million units. The average price is about USD 115 per unit, with gross margins near 34%. Fisheye security cameras are wide-angle surveillance devices that use ultra-short focal length lenses (typically 180° or 360°) to capture panoramic or hemispherical images, enabling full-area monitoring with a single unit and reducing blind spots compared to traditional cameras. In the supply chain, upstream components include optical lenses (often precision glass or plastic fisheye lenses), CMOS image sensors, digital signal processors (DSP/SoC chips), housings, and connectivity modules (PoE, Wi-Fi, or Ethernet), supplied by semiconductor and optics manufacturers. Midstream, camera OEMs and ODMs such as Hikvision, Dahua Technology, and Axis Communications integrate these components into finished fisheye cameras with embedded software for image stitching, dewarping, and analytics. Downstream, the products are distributed through security system integrators, distributors, and e-commerce channels to end users across commercial buildings, retail stores, transportation hubs, smart cities, and residential security systems, often bundled with video management software (VMS) and cloud-based monitoring services.
