According to our (Global Info Research) latest study, the global Fishing Downriggers market size was valued at US\$ 47.2 million in 2025 and is forecast to a readjusted size of US\$ 62.87 million by 2032 with a CAGR of 4.2% during review period.

Fishing downriggers are devices used in recreational and commercial fishing to help anglers position their bait or lure at specific depths in the water. They consist of a rod holder, a reel with a weighted line (usually a downrigger ball), and a release mechanism that allows the bait to be lowered and maintained at the desired depth. When a fish strikes, the release mechanism detaches, allowing the angler to reel in the catch. Downriggers are commonly used in deep-water fishing to target fish at various depths, especially when surface conditions or species behavior make deeper fishing more productive.
