According to our (Global Info Research) latest study, the global Fishing Tournament Software market size was valued at US\$ 89.21 million in 2025 and is forecast to a readjusted size of US\$ 179 million by 2032 with a CAGR of 10.2% during review period.

Fishing Tournament Software refers to a specialized digital platform used to organize, manage, score, and publish results for fishing competitions. It typically supports online registration, angler/team profiles, entry fee payment, tournament rule configuration, check-in, catch submission, photo or video verification, weigh-in recording, length/weight scoring, real-time leaderboards, judge review, season points, prize calculation, and final results reporting. The software can be used for bass tournaments, saltwater tournaments, kayak fishing, online fishing events, catch-photo-release formats, catch-weigh-release formats, and traditional weigh-in competitions.

Demand for Fishing Tournament Software is growing as fishing clubs, tournament directors, brands, marinas, outdoor retailers, and fishing associations shift from manual registration, paper score sheets, and offline weigh-ins to digital event management and real-time scoring. Key demand drivers include the expansion of catch-and-release tournaments, kayak fishing, online and regional fishing events, mobile payment adoption, conservation-friendly scoring, sponsor visibility, and live leaderboard engagement for anglers and audiences. Business opportunities mainly come from SaaS subscriptions, per-event service fees, payment processing, premium judging tools, live scoring packages, white-label tournament systems, sponsor advertising, and data services. Providers with strong mobile submission, anti-cheating verification, offline weigh-in support, flexible scoring rules, and multi-event series management are better positioned to capture growth.
