Fishmeal is the flour processed out of the fish after milling and drying the fish and its selective body parts, whereas fish oil is the brown or yellow liquid extracted out by pressing the cooked fish. The fishmeal and fish oil are majorly used as additive in the animal and fish feeds. Both fishmeal and fish oil are employed as high protein ingredients in the feeds given to farmland animals and farmed fishes. Fish oil is majorly used in the farm fish feeds with a minor share used in land animal feeds. Moreover, Fishmeal is not fed directly (undiluted) to the animals as feed additive. It is need to be added in animal feeds by following typical inclusion rates for fishmeal which vary among different types of feed.
