The global Fishpond Biological Filtration Circulation Pump market size is expected to reach \$ 1081 million by 2032, rising at a market growth of 7.8% CAGR during the forecast period (2026-2032).

A fishpond biological filtration circulation pump is a specialized circulation and filtration device for fishponds or aquarium systems. It pumps water into the filtration system for mechanical, chemical, or biological treatment, then returns the clean water to the pond. It not only ensures clear water and sufficient dissolved oxygen but also helps remove suspended solids, impurities, and harmful microorganisms, thus maintaining a healthy growth environment for fish and other aquatic organisms, while supporting the long-term stable operation of the water circulation system. In 2024, sales were approximately 690,000 units, with an average selling price of approximately US\$850 per unit, total production capacity of 800,000 units, and a gross profit margin of 34%.

This report studies the global Fishpond Biological Filtration Circulation Pump production, demand, key manufacturers, and key regions.
