According to our (Global Info Research) latest study, the global Five-axis 3D Surface Profilers market size was valued at US\$ 41.6 million in 2024 and is forecast to a readjusted size of USD 68 million by 2031 with a CAGR of 7.2% during review period.

A five-axis 3D surface profiler is an instrument that combines a five-axis motion system with 3D measurement technology for high-precision, omnidirectional three-dimensional topography measurement and analysis of object surfaces. Typically, the instrument consists of a high-precision five-axis displacement stage (including XYZ displacement axes, yaw rotation platforms, etc.), a measuring probe or optical measurement system, a data acquisition and processing system, and control software. It can adjust the measurement angle across multiple degrees of freedom to conduct comprehensive measurements of complex-shaped object surfaces and obtain three-dimensional topography data.
