The global Fixed Automatic Fire Suppression System market size is expected to reach \$ 7416 million by 2029, rising at a market growth of 5.8% CAGR during the forecast period (2023-2029).

A Fixed Automatic Fire Suppression System (FAFSS) is a type of fire suppression system that is designed to automatically detect and extinguish fires in enclosed spaces without the need for human intervention. FAFSS is typically made up of a network of pipes, nozzles, and a detection system. The detection system can be either heat or smoke detectors, which are strategically placed throughout the protected area. When a fire is detected, the detection system sends a signal to the control panel, which activates the suppression system.
