Abstracts

According to our (Global Info Research) latest study, the global Fixed Beam Gantry Machining Center market size was valued at US\$ 791 million in 2024 and is forecast to a readjusted size of USD 1395 million by 2031 with a CAGR of 8.0% during review period.

The fixed beam gantry machining center is a special type of CNC machining equipment. Its main feature is the design of a fixed beam structure and a movable workbench. Because the beam does not move, it is called the fixed beam type. The gantry structure means that the columns and beams of the machining center form a 'gantry' shape, which makes the processing area have a larger space. Since the beam structure is fixed, the workbench moves in the X-axis and Y-axis directions, and the spindle moves in the Z-axis direction, it has high stability and machining accuracy. Fixed beam gantry machining centers are usually used to process large and heavy workpieces, and are suitable for processing technology requirements in automobiles, aerospace, shipbuilding and other fields.

Fixed-beam gantry machining centers occupy more than 45% of the global gantry machining center market with their high cost-effectiveness and strong rigidity. The main driving factors include the industrialization demand of emerging markets (such as the annual procurement volume of the automotive parts industry in Southeast Asia has increased by 8%) and cost-sensitive industry applications (mold rough processing and general mechanical parts account for 70% of its application volume). Chinese brands (Haitian Precision and Genesis) dominate the low-end market with their price advantages, but face the dual pressure of price drops and profit margin declines of five-axis moving beam equipment. Future growth points will focus on automation upgrades

(adding robots to improve production line flexibility) and customization in subdivided fields (such as efficient cutting of photovoltaic brackets and stone carving), while emerging infrastructure demand in India, Africa and other countries will become the key driving force for regional market expansion.
